1 Citation Style

Your main file should have `\documentclass[12pt]{thesis}` as the first line.

To use this thesis citation style, put `\usepackage{thesiscitations}` in your preamble, and use `\bibliographystyle{thesis}` to select the matching bibliography style.

2 Citation Commands

The `thesiscitations` style adds several variations of the citation macro, based on the standard L^AT_EX Chicago bibliography style.

<code>\cite</code>	The <code>\cite{}</code> macro works just like in any other document. It produces citations with full author list and year. eg. (Brown 1978; Jarke, Turner, Stohl, et al. 1985)
<code>\citeNP</code>	The <code>\citeNP{}</code> macro creates a citation that does not have parentheses. eg. Brown 1978; Jarke, Turner and Stohl 1985
<code>\citeN</code>	The <code>\citeN{}</code> macro produces citations with the full author list and year, but can be used as nouns in a sentence; no parentheses appear around the author names, but only around the year. eg. Shneiderman (1978) states that..... <code>\citeN</code> should only be used for a single citation.
<code>\citeA</code>	The <code>\citeA{}</code> macro produces citations with only the full author list. eg. (Brown; Jarke, Turner and Stohl)
<code>\citeANP</code>	The <code>\citeANP{}</code> macro produces citations with only the full author list without parentheses. eg. Brown; Jarke, Turner and Stohl There are several macros for creating abbreviated citations that use the “et al.” construct.
<code>\shortcite</code>	The <code>\shortcite{}</code> macro produces citations with abbreviated author and year.
<code>\shortciteNP</code>	The <code>\shortciteNP{}</code> macro produces citations with abbreviated author and year and no parentheses
<code>\shortciteN</code>	The <code>\shortciteN{}</code> macro produces citations with abbreviated author and year that can be used as nouns in a sentence; no parentheses appear around the author names, but only around the year.
<code>\shortciteA</code>	The <code>\shortciteA{}</code> macro produces citations with abbreviated author and no year.
<code>\shortciteANP</code>	The <code>\shortciteANP{}</code> macro produces citations with abbreviated author and year, but no parentheses. There are macros for creating citations that only contain the year.
<code>\citeyear</code>	The <code>\citeyear</code> macro produces citations with only the year.
<code>\citeyearNP</code>	The <code>\citeyearNP</code> macro produces citations with only the year and no parentheses. Place commas in-between citations in the same <code>\citeyear</code> , <code>\citeyearNP</code> , <code>\citeN</code> , or <code>\shortciteN</code> command. Use something like <code>\citeN{ref1,ref2,ref3}</code> and <code>\citeN{ref4}</code> for a list.
